CONTENTS

acctcom ..... Searches and prints process accounting files 3
adb ..... Invokes the absolute debugger 9
addbss ..... Increases the amount of BSS space in an executable file 18
admin ..... Creates and administers SCCS files 19
airlogger ..... Logs AIR messages in the system log 24
alias ..... Defines or displays aliases 26
amlaw ..... Displays maximum theoretical parallel processing speedups 28
apropos ..... Locates commands by keyword 30
ar ..... Archive and library maintainer for portable archives 31
asa ..... Interprets ASA carriage control characters 35
ascheck ..... Validates the array services configuration 37
at ..... Executes commands at a later time 39
awk ..... Pattern scanning and processing language 44
banner ..... Makes posters 51
basename ..... Prints parts of path names on standard output 52
batch (see at) ..... Executes commands at a later time 39
bc ..... An arbitrary precision calculator language 54
bdiff ..... Compares very large files for differences 67
bftp ..... Provides user interface to the background file transfer program 69
bg ..... Runs jobs in the background 73
bld ..... Maintains relocatable libraries 74
builddefs ..... Reads a definitions file that has embedded keywords to produce a keyword file and a definitions file without embedded keywords 79
cal ..... Prints calendar 83
calendar ..... Reminder service 84
cat ..... Concatenates and prints files 86
caterr ..... Processes message text files 88
catxt ..... Extracts message explanations from a message text file 92
cb ..... C program beautifier 95
cd ..... Changes working directory 96
cdc ..... Changes the delta commentary of an SCCS delta 97
cflow ..... Generates C-language flowgraph 100
chacid ..... Changes account ID of disk files 103
checkeq (see eqn) ..... Typesets mathematics 252
checknr ..... Checks nroff and troff input files; reports possible errors 105
chgrp ..... Changes the group ownership of a file 107
chkey ..... Changes your encryption key 109
chkpnt ..... Checkpoints a process, multitask group, or job 110
chkpnt_util ..... Verifies restartability of restart files 112
chkptint ..... Registers current session to be checkpointed upon shutdown and/or periodically 115
chmod ..... Changes mode of files or directories 117
chown ..... Changes owner of files or directories 122
chsh ..... Changes default login shell 124
cksum ..... Writes file checksums and sizes 126
clear ..... Clears terminal screen 128
cmp ..... Compares two files 129
col ..... Filters reverse line feeds 131

comb ..... Combines SCCS deltas 133
comm ..... Selects or rejects lines common to two sorted files 135
command ..... Executes a simple command 137
compress ..... Compresses expanded files 139
cp ..... Copies files 142
cpio ..... Copies file archives in and out 145
crontab ..... Creates or modifies the user's crontab file 149
crypt ..... Encodes or decodes a file 152
csh ..... Invokes the C shell 154
csort ..... Sorts and/or merges blocked files 177
csplit ..... Splits files based on context 184
ctags ..... Creates a tags file 187
cut ..... Cuts out selected fields of each line of a file 189
cxref ..... Generates C-language program cross-reference table 192
date ..... Prints and sets the date 195
dd ..... Converts and copies a file to the specified output device 200
define ..... Displays definitions of Cray Research technical terms and terms added by a local site that match a specified search term 204
delta ..... Makes a delta (change) to an SCCS file 207
deplib ..... Manipulates dependent library names in bld library files 210
deroff ..... Removes nroff, troff, tbl, and eqn constructs 212
df ..... Reports free disk space 213
diff ..... Differential file comparator 218
diff3 ..... Makes a three-way differential file comparison 221
diffmk ..... Marks differences between versions of a troff(1) input file 223
dircmp ..... Compares directories 224
dirname (see basename) ..... Prints parts of path names on standard output 52
domainname ..... Sets or displays name of current network information service (NIS) domain 225
du ..... Summarizes disk usage 226
echo ..... Echoes arguments 229
ed ..... Text editor 231
edit ..... Text editor (variant of ex(1)) 242
egrep (see grep) ..... Searches a file for a pattern 332
emacs ..... GNU project Emacs 245
env ..... Sets environment for command execution 250
eqn ..... Typesets mathematics 252
etags ..... Generates tag file for Emacs 255
ex ..... Text editor 257
exdf ..... Transfers files to or from the IOS partition on the system console (expander disk for the CRAY EL series) 263
expand ..... Expands tabs to spaces and vice versa 265
explain ..... Displays the explanation for an error message 267
expr ..... Evaluates arguments as an expression 273
factor ..... Factors a number 276
false (see true) ..... Provides truth values 995
fc ..... Displays process command history list 277
fck ..... Provides file information from file system internals 280
fg ..... Runs jobs in the foreground 281
fgrep (see grep) ..... Searches a file for a pattern 332
file ..... Determines file type 282

find	Finds files	284
finger	Provides user information	290
flodump	Recovers Flowtrace data from a dump or running process	292
fmgen	Fortran makefile generator	294
fold	Folds long lines of files for finite-width output device	296
from	Prints mail header lines to show you from whom your mail originated	298
fsplit	Splits Fortran files	299
ftp	Transfers files to and from a remote network site	301
fts	Performs file transfer server function for bftp(1B)	313
gencat	Generates a message catalog	314
get	Gets a version of an SCCS file	316
getconf	Gets configuration values	323
getopt	Parses command options	326
getopts	Parses utility options	329
grep	Searches a file for a pattern	332
groups	Shows group memberships	336
guest	Performs UNICOS Guest administrative functions	338
hash	Remembers or reports utility locations	348
head	Displays the first few lines of a file	350
help	Provides explanation of SCCS messages and commands	351
host	Looks up host names by using domain server	353
hostid	Sets or prints identifier of current host system	356
hostname	Prints the name of current host system	357
hpm	Monitors hardware performance during program execution	358
iconv	Codeset conversion	361
id	Prints user and group IDs and names	363
intro	Introduces user utilities and commands	1
ipcrm	Removes a message queue, semaphore set, or shared memory ID	365
ipcs	Reports interprocess communication (IPC) facilities status	367
ispell	Corrects spelling for a file	371
ja	Job accounting information	373
jobs	Displays status of jobs in the current session	386
join	Joins specified lines of files	388
jstat	Displays job status information	391
kcp	Copies remote files and directories	393
kdestroy	Destroys Kerberos tickets	395
keylogin	Decrypts and stores a secret key	396
kill	Terminates or signals processes	397
kinit	Logs in to the Kerberos authentication and authorization system	400
klist	Provides list of currently held Kerberos tickets	401
klogin	Performs remote login	402
kpasswd	Changes a user's Kerberos password	404
krsh	Connects to the remote shell	405
ksh	Korn shell and standard shell, command and programming language	407
ksrvtgt	Uses a service key to fetch and store a Kerberos ticket-granting ticket	441
ksu	Uses Kerberos to substitute user ID	442
last	Indicates the last logins of users and teletypes	444
ld	Invokes the link editor	446
lex	Generates programs for simple lexical tasks	450
limit	Sets resource limits	454

line ..... Reads one line 457
lint ..... A C-language program checker 459
lmcksum ..... Checksums the FLEXlm license file 463
lmdown ..... Shuts down all FLEXlm license daemons gracefully 464
lmgrd ..... Invokes the FLEXlm license daemon 465
lmhostid ..... Displays the host ID of a system 467
lmremove ..... Removes specific FLEXlm licenses and returns them to license pool 468
lmreread ..... Instructs the FLEXlm license daemon to reread the license file 469
lmstat ..... Reports status of FLEXlm license daemons and feature usage 471
lmutil ..... Core FLEXlm utility 473
lmver ..... Displays the FLEXlm version being used 474
ln ..... Links files 475
locale ..... Gets locale-specific information 477
localedef ..... Defines locale environment 479
logger ..... Makes entries in the system log 481
login ..... Signs on 484
logname ..... Gets user's login name 489
lorder ..... Finds ordering relation for an object library 490
lp ..... Sends files to a printer 492
lpq ..... Spool queue examination program 494
lpr ..... Prints off-line 496
lprm ..... Removes jobs from the line printer spooling queue 499
ls ..... Lists contents of directory 501
m4 ..... Invokes a macro processor 506
machid ..... Gives truth value about processor type 510
mail ..... Invokes an electronic message system 512
mailq ..... Prints the contents of the mail queue 517
mailx ..... Invokes an electronic message processing system 519
make ..... Maintains, updates, and regenerates groups of programs 534
makekey ..... Generates encryption key 548
man ..... Displays or prints online man page information 549
mesg ..... Permits or denies messages 552
mkdir ..... Creates a directory 554
mkfifo ..... Makes FIFO special files 556
more ..... File perusal filter for CRT viewing 558
msgi ..... Sends informative message to operator 563
msgr ..... Sends action message to operator 565
mt ..... Issues commands to a magnetic tape drive 567
mtdump ..... Examines unformatted dump of multitasking history buffer 569
mv ..... Moves files or a directory 572
mvf ..... Provides a multivolume tape filter 575
nasa ..... Adds ASA carriage control characters for printing 579
nawk (see awk) ..... Pattern scanning and processing language 44
neqn (see eqn) ..... Typesets mathematics 252
netstat ..... Displays network status 581
newacct ..... Changes account ID 588
newaliases ..... Rebuilds the sendmail(8) alias database 590
newgrp ..... Changes to a new group 591
news ..... Prints news items 593
nfsid ..... Performs NFS authorization functions to NFS servers 595
nice ..... Invokes a utility that has an altered scheduling priority 597

nl	Line-numbering filter	599
nlimit	Queries and modifies resource limits	602
nm	Prints name list	608
nmake	Maintains and updates programs	611
nohup	Invokes a utility immune to hangups and quits	631
nroff	Text formatting language	633
nslookup	Queries name servers interactively	636
obc	Invokes the arithmetic language preprocessor	641
od	Dump files in various formats	645
odc	Invokes the desk calculator	649
pack	Compresses and expands files	652
page (see more)	File perusal filter for CRT viewing	558
passwd	Changes login password	655
paste	Merges same lines of files or subsequent lines of a file	658
patch	Applies a diff(1) file to an original file	661
pathchk	Checks path names	665
pax	Portable archive interchange	667
pcat (see pack)	Compresses and expands files	652
perfscripts	Generates a file tree containing performance tool files	674
pg	File perusal filter for CRTs	676
pr	Prints files	680
printenv	Prints the environment variable values	684
printf	Writes formatted output	685
privtext	Gets the privilege text of a file	688
procstat	Gathers I/O and process statistics	691
prs	Prints an SCCS file	693
ps	Reports process status	698
ptyrecon	Manages pty reconnection	704
pwd	Displays working directory name	706
quota	Reports quota information	708
quotamon	Monitors UNICOS quota state	714
rcp	Copies remote files	716
rdist	Maintains identical copies of files over multiple hosts	719
read	Reads a line from standard input	725
red (see ed)	Text editor	231
regcmp	Compiles regular expressions	727
remsh	Invokes a remote shell	728
renice	Sets system scheduling priorities of running processes	730
reset (see tset)	Terminal-dependent initialization	996
resize	Sets terminal settings current window size	732
restart	Recovers a process, multitask group, or job from a restart file	734
rksh (see ksh)	Korn shell and standard shell, command and programming language	407
rlogin	Invokes the remote login	736
rls	Releases reserved tape resources	738
rm	Removes files or directories	740
rmdel	Removes a delta from an SCCS file	743
rmdir (see rm)	Removes files or directories	740
rmgr	Provides an interface to the Unified Resource Manager (URM) daemon	745
rpcgen	Generates code to implement Remote Procedure Call (RPC) protocol	753
rsh (see ksh)	Korn shell and standard shell, command and programming language	407

rsh (see remsh) ..... Invokes a remote shell 728
rsv ..... Reserves tape resources 761
rusers ..... Lists names of users logged in on local machines (RPC version) 764
sact ..... Prints current SCCS file-editing activity 766
sag ..... Displays system activity graph 768
sar ..... Extracts operating system activity information 770
scanit ..... Corrects code for certain user programs on CRAY J90 systems and CRAY EL98 systems 777
sccs ..... Front end for the SCCS subsystem 780
sccsdiff ..... Compares two versions of an SCCS file 784
script ..... Makes a typescript of a terminal session 786
sdiff ..... Compares programs side-by-side 787
sdss ..... Reports status information about the secondary data segment pool 789
sed ..... Invokes the stream editor 792
segldr ..... Invokes the Cray Research segment loader (SEGLDR) 797
setf ..... Initializes a file 807
setucat ..... Sets your active categories 809
setucmp ..... Sets your active compartments 811
setulvl ..... Raises your active security level 813
setusrv ..... Sets your authorized security attributes 815
sh (see ksh) ..... Korn shell and standard shell, command and programming language 407
shrview ..... Displays detailed fair-share scheduler information 818
sim ..... Invokes an interactive Cray simulator 824
size ..... Prints section sizes of executable files 831
sleep ..... Suspends execution for a specified interval 833
sm ..... Invokes the UNICOS source manager (USM) 835
snmpget ..... Communicates with a network entity by using SNMP GET requests 854
snmpgetnxt ..... Communicates with a network entity by using SNMP requests 856
snmpnetstat ..... Shows network status by using SNMP 858
snmpstatus ..... Retrieves important information from a network entity by using SNMP requests 861
snmptest ..... Communicates with a network entity by using SNMP requests 863
snmptrap ..... Sends an SNMP TRAP message to a host 865
snmptrapd ..... Receives and logs SNMP TRAP messages 867
snmpwalk ..... Communicates with a network entity by using SNMP requests 869
snmpwalka (see snmpwalk) ..... Communicates with a network entity by using SNMP requests 869
soelim ..... Resolves and eliminates .so requests from nroff(1) or troff(1) input 871
sort ..... Sorts, merges, or sequence check text files 872
spacl ..... Manages an access control list (ACL) 878
spclr ..... Performs secure clear operations 884
spget (see spset) ..... Sets and displays security attributes 889
split ..... Splits files into pieces 887
spset ..... Sets and displays security attributes 889
strings ..... Finds printable strings in files 895
strip ..... Removes symbol table from an executable file 897
stty ..... Sets the options for a terminal 899
su ..... Lets you become another user or the super user 906
sum ..... Prints checksum and block count of a file 909
sync ..... Flushes file system cache 911
sysconf ..... Displays system configuration data 912

tabs ... Sets tabs on a terminal ... 913
tail ... Copies the last part of a file ... 915
talk ... Enables one user to communicate with another user ... 918
tar ... Archives tape files ... 920
target ... Verifies target CPU characteristics ... 924
tbl ... Formats tables for nroff(1) or troff(1) ... 928
tc ... troff(1) output interpreter ... 931
tee ... Duplicates output ... 933
telnet ... User interface to the TELNET protocol ... 935
test ... Performs a conditional evaluation ... 947
tftp ... Invokes the trivial file transfer program ... 950
ticksum ... Provides a time independent checksum of a file ... 953
time ... Times a simple command ... 954
timex ... Times a command and reports process data and system activity ... 955
tmpdir ... Creates a unique temporary directory ... 957
touch ... Updates access and modification times of a file ... 960
tpcatalog ... Catalogs, recatalogs, or deletes a dataset in a front-end catalog ... 963
tplist ... Lists contents of tape volume ... 965
tpmnt ... Requests a tape mount for a tape file ... 968
tpquery ... Queries autoloaders for VSN information ... 978
tprst ... Displays reserved tape status for current job ID ... 981
tpstat ... Displays current tape status ... 983
tput ... Initializes a terminal or query terminfo database ... 987
tr ... Translates characters ... 990
troff ... Typesets or formats documents ... 993
true ... Provides truth values ... 995
tset ... Terminal-dependent initialization ... 996
tsort ... Performs a topological sort ... 1001
tty ... Prints the pathname of the user's terminal ... 1003
type ... Writes a description of a command type ... 1005
udbsee ... Writes the ASCII source of a user database ... 1007
ulimit ... Sets or reports file size limit ... 1013
umask ... Sets file-creation mode mask ... 1015
unalias ... Removes alias definitions ... 1017
uname ... Prints name of current system ... 1018
uncompress ... Expands expanded files ... 1020
unexpand (see expand) ... Expands tabs to spaces and vice versa ... 265
unget ... Undoes a previous get of an SCCS file ... 1022
unifdef ... Resolves and removes lines surrounded by #ifdef preprocessor statements ... 1024
uniq ... Reports repeated lines in a file ... 1026
units ... Unit conversion program ... 1028
unpack (see pack) ... Compresses and expands files ... 652
ustat ... Displays Unified Resource Manager (URM) session information ... 1030
uucp ... System-to-system copy ... 1036
uudecode (see uuencode) ... Encodes or decodes a binary file ... 1039
uuencode ... Encodes or decodes a binary file ... 1039
uustat ... uucp status inquiry and job control ... 1041
uux ... System-to-system copy ... 1043
val ... Validates SCCS file ... 1047
vc ... SCCS version control ... 1049

vedit (see vi) ..... Invokes the screen-oriented (visual) display editor 1052
vi ..... Invokes the screen-oriented (visual) display editor 1052
view (see vi) ..... Invokes the screen-oriented (visual) display editor 1052
wait ..... Waits for completion of a process 1062
wc ..... Counts bytes, characters, lines, and words in a file 1064
what ..... Identifies SCCS files and UNICOS Source Manager (USM) files 1066
whatis ..... Displays a one-line summary about a command 1068
whereis ..... Locates source, binary, and/or manual for program 1069
whichcat ..... Returns the name of the message system catalog being accessed 1071
who ..... Reports who is on the system 1072
whoami ..... Displays the effective current user name 1075
write ..... Lets you write to another user 1076
xargs ..... Constructs argument lists and executes a utility 1079
yacc ..... Yet another compiler compiler 1082
ypcat ..... Prints values in a network information service (NIS) database 1085
ypmatch ..... Prints the value of one or more keys from a network information service (NIS) map 1086
yppasswd ..... Changes login password in network information service (NIS) 1087
ypwhich ..... Specifies which host is the network information service (NIS) server or map master 1088
zcat ..... Displays expanded files 1090
