CONTENTS

accept ... Accepts a connection on a socket ... 29
access ... Determines accessibility of a file ... 33
acct ... Enables or disables process accounting ... 37
acctctl ... Checks status of, enables, and disables process, daemon, and record accounting ... 39
acctid ... Changes account ID of a process ... 42
adjtime ... Corrects the time to allow synchronization of the system clock ... 44
alarm ... Sets a process alarm clock ... 46
bind ... Binds a name to a socket ... 49
brk ... Changes data segment space allocation ... 53
bsdsignal (see signal) ... Changes action associated with a signal ... 470
bsdsigpause (see sigsuspend) ... Releases blocked signals and waits for interrupt ... 483
chacid ... Changes disk file account ID ... 56
chdir ... Changes working directory ... 58
chdiri ... Changes a directory by using the inode number ... 61
chkpnt ... Checkpoints a process, multitask group, or job ... 63
chmem ... Retrieves or modifies system physical memory availability ... 69
chmod ... Changes the mode of a file ... 71
chown ... Changes owner and group of a file ... 75
chroot ... Changes the root directory ... 79
close ... Closes a file descriptor ... 81
cmptext ... Compares the supplied character sequence with the privilege text of the calling process ... 82
connect ... Initiates a connection on a socket ... 84
cpselect ... Selects which processors may run the process ... 88
creat ... Creates a new file or rewrites an existing one ... 90
cutimes ... Updates user execution time ... 94
dacct ... Enables or disables process and daemon accounting ... 97
devacct ... Controls device accounting ... 99
dmmode ... Sets and gets data migration retrieval mode ... 102
dmofrq ... Processes offline file requests ... 103
dup ... Duplicates an open file descriptor ... 107
exctl ... Exchanges control ... 109
exec ... Executes a file ... 111
execl (see exec) ... Executes a file ... 111
execle (see exec) ... Executes a file ... 111
execlp (see exec) ... Executes a file ... 111
execv (see exec) ... Executes a file ... 111
execve (see exec) ... Executes a file ... 111
execvp (see exec) ... Executes a file ... 111
_exit (see exit) ... Terminates process ... 118
exit ... Terminates process ... 118
fchmod (see chmod) ... Changes the mode of a file ... 71
fchown (see chown) ... Changes owner and group of a file ... 75
fcntl ... Controls open files ... 121
fgetpal ... Gets the privilege assignment list (PAL) and privilege sets of a file ... 130
fjoin (see join) ... Joins files ... 221
fork ... Creates a new process ... 131

fpathconf (see pathconf) ..... Determines value of file or directory limit 299
fsecstat (see secstat) ..... Gets file security attributes 371
fsetpal ..... Sets the privilege assignment list (PAL) and privilege sets of a file 136
fstat (see stat) ..... Gets file status 503
fstatfs (see statfs) ..... Gets file system information 509
fstatvfs (see statvfs) ..... Gets file system information 514
fsync ..... Synchronizes the in-core state of a file with that on disk 138
getash ..... Gets an array session handle 140
getdents ..... Reads and formats directory entries as file system independent 141
getdevn ..... Gets device number or driver entry 143
getegid (see getuid) ..... Gets real user, effective user, real group, or effective group IDs 197
geteuid (see getuid) ..... Gets real user, effective user, real group, or effective group IDs 197
getfacl ..... Gets access control list entries for file 144
getgid (see getuid) ..... Gets real user, effective user, real group, or effective group IDs 197
getgroups ..... Gets or sets group list 148
gethostid ..... Gets or sets unique identifier of local host 151
gethostname ..... Gets or sets name of local host 153
getinfo ..... Gets specified user, job, or process signal information 155
getjtab ..... Gets the job table entry associated with a process 158
getlim ..... Obtains current resource limit information 160
_getlwpid (see getpid) ..... Gets process, process group, or parent process IDs 176
_getlwppid (see getpid) ..... Gets process, process group, or parent process IDs 176
getmount ..... Returns information about the kernel mount table 163
getpal ..... Gets the privilege assignment list (PAL) and privilege sets of a file 167
getpeername ..... Gets name of connected peer 169
getpermit ..... Gets or sets user permissions 172
getpgrp (see getpid) ..... Gets process, process group, or parent process IDs 176
getpid ..... Gets process, process group, or parent process IDs 176
getportbm (see setportbm) ..... Sets or gets the kernel memory port bit map 420
getppid (see getpid) ..... Gets process, process group, or parent process IDs 176
getppriv ..... Gets the privilege state of the calling process 179
getsectab ..... Gets security names and associated values 180
getsockname ..... Gets socket name 182
getsockopt ..... Gets or sets options on sockets 184
getsysv ..... Gets security attributes 189
gettimeofday ..... Gets or sets date and time 194
getuid ..... Gets real user, effective user, real group, or effective group IDs 197
getusrv ..... Gets security validation attributes of the process 199
_globalexit (see exit) ..... Terminates process 118
globalexit (see exit) ..... Terminates process 118
guestctl ..... Controls and reports the status of major guest system functions 202
ialloc ..... Allocates storage for a file 211
intro ..... Introduces system calls and error numbers 1
ioctl ..... Controls device 214
jacct ..... Enables or disables job accounting 219
join ..... Joins files 221
kill ..... Sends a signal to a process or a group of processes 223
killm (see kill) ..... Sends a signal to a process or a group of processes 223
lchown (see chown) ..... Changes owner and group of a file 75
limit ..... Sets resource limits 227
limits ..... Returns or sets limits structure for fair-share scheduler 232

link ... Creates a link to a file ... 235
listen ... Listens for connections on a socket ... 239
listio ... Initiates a list of I/O requests ... 243
_localexit (see exit) ... Terminates process ... 118
localexit (see exit) ... Terminates process ... 118
lsecstat (see secstat) ... Gets file security attributes ... 371
lseek ... Moves read/write file pointer ... 249
lsetattr ... Sets metadata for a file ... 252
lstat (see stat) ... Gets file status ... 503
_lwp_alarm (see alarm) ... Sets a process alarm clock ... 46
_lwp_exit (see exit) ... Terminates process ... 118
_lwp_kill (see kill) ... Sends a signal to a process or a group of processes ... 223
_lwp_killm (see kill) ... Sends a signal to a process or a group of processes ... 223
mkdir ... Makes a directory ... 254
mkfifo (see mknod) ... Makes a directory or a special or regular file ... 257
mknod ... Makes a directory or a special or regular file ... 257
mount ... Mounts a file system ... 262
msgctl ... Provides message control operations ... 265
msgget ... Accesses the message queue ... 269
msgrcv ... Reads a message from a message queue ... 271
msgsnd ... Sends a message to a message queue ... 274
mtimes ... Provides multitasking execution overlap profile ... 277
newarraysess ... Starts a new array session ... 279
_newexit (see exit) ... Terminates process ... 118
newexit (see exit) ... Terminates process ... 118
newgetpid (see getpid) ... Gets process, process group, or parent process IDs ... 176
newgetppid (see getpid) ... Gets process, process group, or parent process IDs ... 176
nice ... Changes priority of processes ... 281
nicem (see nice) ... Changes priority of processes ... 281
nsecctl ... Accesses or manipulates network security information ... 284
open ... Opens a file for reading or writing ... 287
openi ... Opens a file by using the inode number ... 297
pathconf ... Determines value of file or directory limit ... 299
pause ... Suspends process until signal ... 305
pipe ... Creates an interprocess channel ... 307
plock ... Locks process in memory ... 310
policy ... Returns or sets information on the CPU allocation policy ... 312
profil ... Generates an execution time profile ... 314
ptrace ... Traces processes ... 316
ptyrecon ... Manages pty reconnection ... 320
quotactl ... Manipulates file system quotas ... 322
read ... Reads from file ... 329
reada ... Performs asynchronous read from a file ... 333
readlink ... Reads value of a symbolic link ... 339
recall ... Waits for I/O completions ... 342
recalla ... Waits for I/O completion(s) ... 344
recalls (see recall) ... Waits for I/O completions ... 342
recv ... Receives a message from a socket ... 347
recvfrom (see recv) ... Receives a message from a socket ... 347
recvmsg (see recv) ... Receives a message from a socket ... 347
rename ... Changes the name of a file ... 352

resch ..... Reschedules a process 356
restart ..... Restarts a process, multitask group, or job 357
resume (see suspend) ..... Controls execution of processes 518
rmdir ..... Removes a directory 363
rmfacl ..... Removes an access control list from a file 366
sbreak (see brk) ..... Changes data segment space allocation 53
sbrk (see brk) ..... Changes data segment space allocation 53
schedv ..... Sets memory scheduling parameters 368
secstat ..... Gets file security attributes 371
select ..... Examines synchronous I/O multiplexing 374
semctl ..... Provides semaphore control operations 378
semget ..... Provides access to semaphore identifiers 383
semop ..... Provides general semaphore operations 386
send ..... Sends a message from a socket 390
sendmsg (see send) ..... Sends a message from a socket 390
sendto (see send) ..... Sends a message from a socket 390
setash ..... Sets an array session handle 393
setdevs ..... Sets file security label and security flag attributes 395
setegid (see setregid) ..... Sets real or effective group ID 423
seteuid (see setreuid) ..... Sets real or effective user ID 426
setfacl ..... Sets access control list for file 398
setfcmp ..... Sets file compartments 402
setfflg ..... Sets file security flags 405
setflvl ..... Sets security level of a file 407
setgid (see setuid) ..... Sets user or group IDs 438
setgroups (see getgroups) ..... Gets or sets group list 148
sethostid (see gethostid) ..... Gets or sets unique identifier of local host 151
sethostname (see gethostname) ..... Gets or sets name of local host 153
setjob ..... Sets job ID 409
setlim ..... Sets user-controllable resource limits 411
setpal ..... Sets the privilege assignment list (PAL) and privilege sets of a file 414
setpermit (see getpermit) ..... Gets or sets user permissions 172
setpgid ..... Sets process-group-ID for job control 416
setpgrp ..... Sets process-group ID 418
setportbm ..... Sets or gets the kernel memory port bit map 420
setppriv ..... Sets the privilege state of the calling process 422
setregid ..... Sets real or effective group ID 423
setreuid ..... Sets real or effective user ID 426
setrgid (see setregid) ..... Sets real or effective group ID 423
setruid (see setreuid) ..... Sets real or effective user ID 426
setsid ..... Creates session and sets process group ID 430
setsockopt (see getsockopt) ..... Gets or sets options on sockets 184
setsysv ..... Sets minimum and maximum level range, authorized compartments, and security auditing options 431
settimeofday (see gettimeofday) ..... Gets or sets date and time 194
setucat ..... Sets active categories of a process 434
setucmp ..... Sets active compartments of the process 436
setuid ..... Sets user or group IDs 438
setulvl ..... Sets the active security level of the process 442
setusrv ..... Sets security validation attributes of the process 444
shmat ..... Attaches shared memory segment 447

shmctl ... Provides shared memory control operations ... 450
shmdt ... Detaches shared memory segment ... 455
shmget ... Accesses shared memory identifier ... 457
shutdown ... Shuts down part of a full-duplex connection ... 460
sigaction ... Examines or changes action associated with a signal ... 462
sigblock (see sigprocmask) ... Examines and changes blocked signals ... 479
sigctl ... Provides generalized signal control ... 466
sighold (see sigprocmask) ... Examines and changes blocked signals ... 479
sigignore (see signal) ... Changes action associated with a signal ... 470
signal ... Changes action associated with a signal ... 470
sigpause (see sigsuspend) ... Releases blocked signals and waits for interrupt ... 483
sigpending ... Stores pending signals ... 477
sigprocmask ... Examines and changes blocked signals ... 479
sigrelse (see sigprocmask) ... Examines and changes blocked signals ... 479
sigset (see signal) ... Changes action associated with a signal ... 470
sigsetmask (see sigprocmask) ... Examines and changes blocked signals ... 479
sigsuspend ... Releases blocked signals and waits for interrupt ... 483
sigvec (see sigaction) ... Examines or changes action associated with a signal ... 462
slgentry ... Makes security log entry ... 486
socket ... Creates an endpoint for communication ... 488
socketpair ... Creates a pair of connected sockets ... 495
ssbreak ... Changes size of secondary data segment ... 497
ssread ... Reads or writes to secondary data segment ... 500
sswrite (see ssread) ... Reads or writes to secondary data segment ... 500
stat ... Gets file status ... 503
statfs ... Gets file system information ... 509
statvfs ... Gets file system information ... 514
stime ... Sets time ... 517
suspend ... Controls execution of processes ... 518
symlink ... Makes a symbolic link to a file ... 522
sync ... Flushes system buffers out of main memory ... 526
sysconf ... Retrieves system implementation information ... 528
sysfs ... Gets file system type information ... 533
syssgi ... Provides a system interface to Silicon Graphics workstations ... 536
tabinfo ... Returns information on and reads a system table ... 538
tabread (see tabinfo) ... Returns information on and reads a system table ... 538
target ... Retrieves or modifies machine characteristics ... 541
tcgetpgrp ... Gets or sets terminal process group ID of the foreground process group ... 543
tcsetpgrp (see tcgetpgrp) ... Gets or sets terminal process group ID of the foreground process group ... 543
_tfork ... Creates a multitasking process ... 545
thread ... Registers this process as a thread ... 546
_threadexit (see exit) ... Terminates process ... 118
time ... Gets time ... 548
times ... Gets process and child process times ... 550
trunc ... Truncates a file ... 552
ulimit ... Gets and sets user limits ... 555
umask ... Sets and gets file creation mask ... 558
umount ... Unmounts a file system ... 560
uname ... Gets name of current operating system ... 562
unlink ... Removes directory entry ... 564
unlink2 (see unlink) ... Removes directory entry ... 564

upanic ..... Stops the system from a user process 569
ustat ..... Gets file system statistics 571
utime ..... Sets file access and modification times 573
vfork ..... Creates a new process in a memory efficient way 577
wait ..... Waits for a child process to stop or terminate 580
waitjob ..... Gets information about a terminated child job 586
waitpid (see wait) ..... Waits for a child process to stop or terminate 580
wracct ..... Writes an accounting record to the kernel accounting file or to a daemon accounting file 588
write ..... Writes on a file 590
writea ..... Performs asynchronous write on a file 596
