

## CONTENTS

acct .....	Per-process accounting file format .....	268
acid .....	Format of the account ID information file .....	275
acl .....	User access control lists format .....	276
aft .....	ASCII flaw table .....	279
aliases .....	Defines alias database for sendmail(8) .....	281
a.out .....	Loader output file .....	283
ar .....	Archive file format .....	286
arp .....	Address Resolution Protocol .....	235
arrayd.auth (see arrayd.conf) .....	Array services configuration files .....	288
arrayd.conf .....	Array services configuration files .....	288
bld .....	Relocatable library files format .....	299
confval .....	Configuration file for various products .....	300
core .....	Core file format .....	302
cpio .....	cpio archive file format .....	304
cpu .....	Interface to special CPU functions .....	3
cshrc .....	C shell start-up and termination files .....	307
def_ld (see def_seg) .....	Loader directives files .....	309
def_seg .....	Loader directives files .....	309
dir .....	Directory file format .....	311
dirent .....	File system-independent directory entry format .....	312
disk .....	Physical disk interface .....	9
dm .....	Kernel to data migration daemon communications interface .....	13
dsk .....	Disk drive interface .....	14
dump .....	Incremental file system dump format .....	314
dumpdates (see dump) .....	Incremental file system dump format .....	314
eqnchar .....	Special character definitions for eqn(1) .....	571
err .....	Error-logging interface .....	16
errfile .....	Error-log file format .....	317
esd .....	External Semaphore Device Logical-layer Interface .....	17
etc/netconfig (see netconfig) .....	Network configuration database .....	135
exports .....	Directories to export to NFS clients .....	320
exrc .....	Start-up files for ex(1) and vi(1) .....	322
fcntl .....	File control options .....	324
FDDI (see fddi) .....	ANSI Fiber Distributed Data Interface .....	27
fddi .....	ANSI Fiber Distributed Data Interface .....	27
fei .....	Front-end interface .....	53
fmsg .....	GigaRing I/O message and MMR interface .....	54
fs .....	File system partition format .....	326
fslog .....	File system error log interface .....	56
fslrec .....	File system error log record format .....	331
fstab .....	File that contains static information about file systems .....	333
ftpusers .....	List of unacceptable ftp(1B) users .....	337
gated-config .....	Gated configuration file syntax .....	338
gettydefs .....	Speed and terminal settings used by getty .....	359
group .....	Format of the group-information file .....	361
hdd .....	HIPPI disk device interface .....	57
HIPPI (see hippi) .....	ANSI High Performance Parallel Interface .....	64
hippi .....	ANSI High Performance Parallel Interface .....	64

hosts .....	Contains network host name database .....	363
hosts.bin (see hosts) .....	Contains network host name database .....	363
hosts.equiv .....	Contains public information for validating remote autologin .....	365
hpi3 .....	IPI-3/HIPPI packet driver configuration file .....	75
hpm .....	Hardware Performance Monitor interface .....	103
hsx .....	High-speed External Communications Channel interface .....	105
hy .....	HYPERchannel adapter interface .....	111
icmp .....	Internet Control Message Protocol .....	237
igmp .....	Internet Group Management Protocol .....	240
inet .....	Description of Internet protocol family .....	241
inetd.conf .....	Internet super-server configuration file .....	367
infoblk .....	Loader information table .....	371
inittab .....	Script for <code>init(8)</code> process .....	373
inode .....	inode file system .....	116
inode .....	Inode format .....	377
intro .....	Introduction to special files .....	1
intro .....	Introduction to TCP/IP networking facilities and files .....	228
intro .....	Introduction to file formats .....	263
intro .....	Miscellaneous information pages .....	570
iose (see iose) .....	IOS model E interface .....	118
iose .....	IOS model E interface .....	118
ip .....	Description of Internet Protocol .....	243
ipc .....	Interprocess communication (IPC) access structure .....	381
ipi3 .....	IPI-3/IPI interface .....	122
iptos .....	IP Type-of-Service database .....	383
issue .....	Login message file .....	386
klog (see log) .....	System message log files .....	127
kmem (see mem) .....	Common or main memory files .....	130
krb.conf .....	Kerberos configuration file .....	387
krb.realms .....	Host to Kerberos realm translation file .....	388
ldd .....	Logical disk device .....	124
ldesc .....	Logical disk descriptor file .....	389
ld_Flib (see def_seg) .....	Loader directives files .....	309
license.dat .....	License configuration file for FLEXlm licensed applications .....	390
license.options .....	System administrator options file for FLEXlm licensed applications .....	394
lnode .....	Kernel user limits structure for fair-share scheduler .....	398
lo .....	Software loopback network interface .....	126
log .....	System message log files .....	127
login (see cshrc) .....	C shell start-up and termination files .....	307
logout (see cshrc) .....	C shell start-up and termination files .....	307
mailrc .....	Start-up files for <code>mailx(1)</code> .....	402
mailx.rc (see mailrc) .....	Start-up files for <code>mailx(1)</code> .....	402
MAKEFILE (see makefile) .....	File containing site-specific <code>make(1)</code> rules .....	404
makefile .....	File containing site-specific <code>make(1)</code> rules .....	404
man .....	Macros to format AT&T reference manual pages .....	572
masterfile .....	Internet domain name server master data file .....	406
mdd .....	Mirrored disk driver .....	128
me .....	Macros for formatting papers .....	576
mem .....	Common or main memory files .....	130
mib.txt .....	Management information base for SNMP applications and SNMP agents, respectively .....	409

mntent (see fstab) .....	File that contains static information about file systems .....	333
mnttab .....	Mounted file system table format .....	410
mnu .....	Interactive mnu-based display package .....	133
motd .....	File that contains message of the day .....	412
ms .....	Text formatting macros .....	580
msg .....	Message queue structures .....	413
msg .....	Text formatting macros for UNICOS messages .....	585
named.boot .....	Domain name server configuration file .....	415
ncdir (see dir) .....	Directory file format .....	311
netconfig .....	Network configuration database .....	135
netgroup .....	List of network groups .....	419
netrc .....	TCP/IP autologin information file for outbound ftp(1B) requests .....	421
networks .....	Network name database .....	423
nfs .....	UNICOS network file system (UNICOS NFS) .....	249
nis .....	A new version of the network information service .....	138
nisfiles .....	NIS+ database files and directory structure .....	149
nl_types .....	Defines message system variables .....	425
np .....	Network packet driver for low-speed interfaces .....	151
npcntl .....	N-packet control interface .....	162
nsswitch .....	Configuration file for the name-service switch .....	163
null .....	Null file .....	167
passwd .....	Format of the password file .....	427
pdd .....	Physical disk device interface .....	168
printcap .....	Printer capability database .....	429
proc .....	Process file system .....	173
profile .....	Format of shell start-up file .....	433
proto .....	Prototype job file for at(1) .....	435
protocols .....	Protocol name database .....	437
pty .....	Pseudo terminal interface .....	178
publickey .....	Public key database .....	438
qdd .....	Physical disk device interface .....	180
queuedefs .....	Queue description file for at(1), batch(1), and cron(8) .....	439
quota .....	Quota control file format .....	441
ram .....	Random-access memory disk interface .....	182
rdd .....	RAM disk driver .....	183
relo .....	Relocatable object table format under UNICOS .....	447
reqt .....	IPI-3 interface .....	185
resolv.conf .....	Domain name resolver configuration file .....	456
rhosts .....	Specifies a list of trusted remote hosts and account names .....	459
rmtab .....	List of remotely mounted file systems .....	461
route .....	Kernel packet forwarding database .....	252
sccsfile .....	Source Code Control System (SCCS) file format .....	462
sdd .....	Striped disk driver .....	186
sds .....	Secondary data storage interface on SSD devices .....	188
secded .....	SECEDED maintenance function interface .....	189
sectab .....	Format for table of defined security names and values .....	466
sem .....	Semaphore facility .....	467
sendmail.cf .....	Configuration file for TCP/IP mail service .....	469
services .....	Network service name database .....	470
sfs .....	File that contains the names of each Cray Research system in an SFS cluster and its associated SFS arbiter .....	192

share .....	Fair-share scheduler parameter table .....	472
shells .....	List of available user shells .....	476
shm .....	Shared memory facility .....	477
slog .....	Security log interface .....	195
slrec .....	Security log record format .....	479
snmpd.defs (see mib.txt) .....	Management information base for SNMP applications and SNMP agents, respectively .....	409
ssd .....	Solid state storage device .....	196
ssdd .....	SSD disk driver .....	197
ssdt .....	GigaRing-based Solid State Disk storage device interface .....	199
symbol .....	UNICOS symbol table entry format .....	483
tape .....	Physical tape device interface .....	201
tapereq .....	Tape daemon interface definition file .....	484
tapetrace .....	Tape daemon trace file format .....	486
tar .....	Tape archive file format .....	488
taskcom .....	Task common table format .....	492
tcp .....	Transmission Control Protocol .....	257
term .....	Format of compiled term file .....	494
terminfo .....	Terminal capability database .....	499
termio .....	General terminal interface .....	203
termios (see termio) .....	General terminal interface .....	203
text_tapeconfig .....	Tape subsystem configuration file .....	524
tmpdir .....	List of authorized users for tmpdir(1) .....	556
tmpdir.users (see tmpdir) .....	List of authorized users for tmpdir(1) .....	556
tpddem .....	Tape daemon interface .....	219
tty .....	Controlling terminal interface .....	223
types .....	Definition of primitive system data types .....	557
udb .....	Format of the user database (UDB) file .....	558
udp .....	Internet User Datagram Protocol .....	261
updaters .....	Configuration file for NIS updating .....	561
utmp .....	utmp and wtmp file formats .....	563
uuencode .....	Encoded uuencode file format .....	565
values .....	Machine-dependent values definition file .....	566
vme .....	VME (FEI-3) network interface .....	224
wtmp (see utmp) .....	utmp and wtmp file formats .....	563
xdd .....	Physical disk device interface .....	225
xtab (see exports) .....	Directories to export to NFS clients .....	320
ypfiles .....	Network information service (NIS) database and directory structure .....	568
