

## A

- Asynchronous mode, 280
- Asynchronous mode diagram, 281

## B

- Build procedures
  - C source code, 285
  - Fortran source code, 286
    - MVS systems, 288
    - VM systems, 286
  - Online diagnostic directories, 285
  - Overview, 285

## C

- Configurations, 275

## E

- Edit example, 291
- Execution
  - MVS command-mode execution, 267
  - Overview, 267
  - UNICOS and UNIX command-line execution, 270
  - UNICOS and UNIX shell script execution, 269
  - VM EXEC procedure execution, 271

## F

- FDDI test
  - Asynchronous active-and-passive mode, 216
  - Commands, 206

- Execution example, 183
- Getting started under UNICOS, 183
- IOS software echo mode, 218
- Loopback mode, 219
- Menus, 193
- Overview, 181
- Statistical information, 195
- Synchronous active-and-passive mode, 216
- Test modes, 216
- Warning situations, 221

### FDR-4 test

- Commands, 254
- Execution example, 245
- Getting started under UNICOS, 245
- Menus, 252
- Overview, 243, 244
- Test modes, 263

### FEI test

- Asynchronous active-and-passive mode, 28
- Commands, 9
- Cray cable loopback mode, 31
- Cray Research data-streaming FEI maintenance panel for an IBM computer system diagram , 33
- Cray Research FEI cable connector panel for an IBM computer system diagram , 41
- Cray Research FEI operator's panel for an IBM computer system diagram , 33
- Cray Research standard FEI maintenance panel for an IBM computer system diagram , 33
- Device name (MVS), 8
- Edit mode example, 291
- FEI loopback mode (front-end computer system) diagram , 33
- FEI loopback mode for a Cray Research fiber-optics link (FOL-3) diagram , 33

- FEI loopback mode for a Cray Research standard FEI (Cray Research computer system) diagram , 33
- FEI loopback mode for an FEI (Cray Research system side) diagram , , 40
- FEI-1 end-to-end mode, 28
- Getting started, 7
- Loopback mode
  - Cray Research fiber-optics link (FOL-3) to an IBM system, 24
  - FEI-1 (data-streaming or standard) loopback mode from a Cray Research system with an IOS-E, 20
  - FEI-1 loopback mode from an IBM system, 17
  - Overview, 17
- Menus, 8
- Overview, 7
- Synchronous active-and-passive mode, 28
- Virtual address (VM), 8
- VM class-B privilege, 8
- Front-end build procedures, 285

## H

- HIPPI test
  - Asynchronous active-and-passive mode, 176
  - Cable loopback test, 167
  - Commands, , 154
  - CRAY Y-MP IOS-E HIPPI cable loopback, 32- or 64-bit (NSC PS32) diagram , 169
  - CRAY Y?MP HIPPI cable loopback (NSC PS8) diagram , 169
  - Dedicated driver mode, 141
  - Device path, 139
  - Device path permissions, 140
  - DFS command output, 164
  - Edit mode example, 291
  - End-to-end mode, 176
  - Execution examples, 141
  - Getting started, 138
  - Major number, 139

- Menus, 154
- Minor number, 139
- NSC PS8 switch diagram , 175
- Overview, 137
- Shared driver mode, 141
- Software loopback (NSC PS8 or PS32) test, 173
- Synchronous active-and-passive mode, 176
- Test environment diagram , 138
- Test mode configurations, 166
- Ultra adapter (loopback switch) diagram , 173
- Ultra adapter loopback test, 171

## L

- Loopback mode
  - Mechanical loopback diagram , 280
  - Overview, 279
  - Software loopback diagram, 280

## M

- MPP test
  - Commands, 232
  - Device nodes, 225
  - Device path names, 225
  - Execution example, 226
  - Getting started, 226
  - IOG echo mode, 239
  - Loopback (software) mode, 240
  - Menus, 230
  - MPP character special files, 225
  - Overview, 225
  - Read from MPP mode, 237
  - Read IOG statistics mode, 235
  - Read YPE statistics mode, 236
  - Test modes, 234
  - Write to MPP mode, 237

**N**

- Networks supported
  - OLNET program, 275
- NSC test
  - Adapter statistics package , 74
  - Asynchronous active-and-passive mode, 67
  - Commands, 57
  - Device path name (MVS), 44
  - Device path name (UNICOS and UNIX), 44
  - Device path permissions (UNICOS and UNIX), 45
  - Device table (UNICOS and UNIX), 45
  - Display driver statistics mode, 81
  - Dump extension registers mode, 77
  - Execution example, 47
  - Getting started under MVS or VM, 44
  - Getting started under UNICOS or UNIX, 44
  - HYPERchannel mapping mode, 79
  - Local adapter loopback mode, 70
  - Local adapter statistics mode, 74
  - Local statistics and clear mode, 75
  - Loopback point selection diagram , 90
  - Map adapter profiles mode, 94
  - Menus, , 56
  - Network message, 54
  - Network message format diagram , 55
  - NSC DX low-level command mode, 87
  - Overview, 41
  - Read single adapter profile mode, 94
  - Remote adapter loopback mode, 71
  - Remote adapter statistics mode, 76
  - Statistics menu, 73
  - Synchronous active-and-passive mode, 66
  - Test environment diagram , 43
  - Test modes, 66
  - Virtual address (VM), 44
  - VM class?B privilege, 44
  - Xmap basic loopback command, 85
  - Xmap commands, 86
  - Xmap comprehensive loopback command, 85
  - Xmapping routine mode, 82

**O**

- OLNET program
  - Accessing the main menu, 4
  - Build procedures, 285
  - Entering commands, 5
  - Execution overview, 2
  - Initializing, 2
  - Interrupting execution, 6
  - Main menu , 4
  - Online diagnostic directories, 285
  - Overview, 1
  - Program mode edit example, 291
  - Supported configurations, 275
- Online diagnostic directories, 285

**P**

- Program mode edit example, 291

**S**

- Synchronous active-and-passive mode, 277
- Synchronous active-and-passive mode diagram, 277

**T**

- Theory of operation
  - Asynchronous mode, 280
  - Asynchronous mode diagram , 281
  - Loopback mode, 279
    - Mechanical loopback diagram, 280
    - Software loopback diagram, 280
  - Synchronous active-and-passive mode, 277
  - Synchronous active-and-passive mode diagram , 277

## V

### VME test

- Asynchronous active-and-passive mode, 123
- Cable loopback mode, 125
- Commands, , 117
- Control cable test mode, 134
- Device channel (cable loopback mode), 126
- Device path name, 100
- Device path permissions, 101
- Device table, 101
- Disable cable interrupts mode, 130
- Display driver statistics mode, 135
- Dump Registers display, , 133
- Dump Registers menu, , 132
- Dump VME registers mode, 132
- Execution example, 103
- FEI-3 board set diagram, , 99
- fymc maintenance character special test mode, 135
- Getting started for the OWS or MWS, 103
- Getting started under UNICOS, 99

- I/O master clear mode, 131
- IOS software echo mode, 134
- IOS-E LOSP/VME multiplexer channels, 126
- Loopback mode and test environment diagram, , 98
- Master clear mode, 131
- Menus, 116
- Network message, 115
- Network message format diagram, , 116
- Overview, 97
- Pseudo-device drivers diagram, , 113
- Synchronous active-and-passive mode, 123
- Test modes, 122
- Testing using the fy driver
  - Overview, 112
  - Pseudo-device drivers, 112
  - Suggested scenarios for testing FEI-3 connections, 115
- VME drivers, 99
- WIN echo mode, 134
